SUMMARY

Computer Information Technology student at BCIT with hands-on experience across IT support, networking and security, databases, and AI-assisted tools. Built a client dashboard that pulls live project-management data and summarizes it with AI, and runs self-hosted infrastructure at home. Former Trainer at Arc'teryx, known for reliability, clear communication, and learning new tools quickly.

TECHNICAL SKILLS

Programming & Data: Python, SQL, Bash, JavaScript/React (project experience), pandas, NumPy, Redis

IT & Networking: Windows Server, Linux (Ubuntu Server), TCP/IP, OPNsense firewall, network segmentation, VirtualBox, CLI/SSH

Cloud & DevOps: AWS (EC2, GuardDuty), Azure, Docker, Cloudflare Tunnels, Terraform, Ansible, Jenkins, Git/GitHub/GitLab

AI Tools: LLM-based summarization, AI APIs integrated into web apps

Certification: Google IT Support Foundations, NPower Canada (2023)

PROJECTS

ZipHQ Performance Dashboard (Group, client project) — React, JavaScript, Asana API, AI

- Built a real-time dashboard for a client that pulls live project data from Asana and shows team performance metrics, replacing manual status updates.
- Integrated an AI layer that turns the raw data into plain-English summaries so managers get instant insight.

AI Job Aggregator Dashboard (Solo, ongoing) — Microservices, Redis

- Building a job search platform where a local AI model reads and scores job postings, and separate small services save and track the results.
- Designing it as a real, usable tool for my portfolio, with an authentication service planned next.

AWS Automated Incident Response (Duo) — AWS GuardDuty, EC2, Python

- Deployed a decoy system to attract attackers, detected intrusions with GuardDuty, and blocked threats automatically.
- Wrote Python scripts that turn security alerts into firewall rule updates, cutting response time from minutes to seconds.

Enterprise ERP System Architecture (Duo) — VirtualBox, OPNsense

- Designed a multi-server ERP environment that keeps running if one server fails, modelled on mid-size company infrastructure.
- Segmented the network with OPNsense so each server reaches only the services it needs.

Self-Hosted Server & Python Store App (Solo) — Docker, Ubuntu, Cloudflare, Python

- Run a home server hosting my portfolio and a Python store app in isolated Docker containers, published through Cloudflare Tunnels with no open ports.
- The store app manages inventory, purchases and transactions; adding user accounts with hashed passwords.

CIT Networking & Sysadmin Labs — Windows Server, Linux, TCP/IP

- Configured servers, set up secure networks, and troubleshot connectivity issues in labs simulating enterprise environments.

EXPERIENCE

Trainer, Arc'teryx — May 2023 – Jan 2025

New Westminster, BC

- Onboarded and trained new hires with quick-start checklists, shortening ramp-up time.
- Documented recurring tooling fixes so coworkers could resolve issues themselves, reducing internal support requests.

EDUCATION

British Columbia Institute of Technology (BCIT) — Jan 2025 – Present

Diploma in Computer Information Technology (CIT) • Systems, Networking, Databases, Cloud, Data Science, Microservices, Enterprise Systems Integration
